

Docket No. AUS920030335US1

**CLAIMS:**

What is claimed is:

- 5    1.    A method of automatically identifying participants at a  
conference who exhibit a particular expression during a  
speech comprising the steps of:  
  
indicating the particular expression;  
10  
  
recording the participants, the recording including  
both audio and video signals;  
  
determining, using the recording of the participants in  
15    conjunction with an automated facial decoding system,  
whether at least one participant exhibits the  
particular expression; and  
  
identifying the at least one participant who exhibits  
20    the particular expression.
2.    The method of Claim 1 wherein the video and audio  
signals representing the at least one participant are  
passed through a regional/cultural filter before the at  
25    least one participant is identified.
3.    The method of Claim 2 wherein the video and audio  
signals representing the at least one participant are  
further passed through an individual filter before the  
30    at least one participant is identified.

Docket No. AUS920030335US1

4. The method of Claim 3 wherein the participants are digitally recorded and the video and data signals are video data.
- 5 5. The method of Claim 4 wherein the audio and video data identifying the at least one participant is stored for future use.
- 10 6. The method of Claim 5 wherein the identifying step includes the step of displaying an image as well as name and location of the at least one individual.
- 15 7. The method of Claim 5 wherein the identifying step includes the step of identifying the at least one individual textually.
- 20 8. A computer program product on a computer readable medium for automatically identifying participants at a conference who exhibit a particular expression during a speech comprising:  
  
code means for indicating the particular expression;  
  
code means for recording the participants, the  
25 recording including both audio and video signals;  
  
code means for determining, using the recording of the participants in conjunction with an automated facial decoding system, whether at least one participant  
30 exhibits the particular expression; and

Docket No. AUS920030335US1

code means for identifying the at least one participant who exhibits the particular expression.

- 5 9. The computer program product of Claim 8 wherein the video and audio signals representing the at least one participant are passed through a regional/cultural filter before the at least one participant is identified.
- 10 10. The computer program product of Claim 9 wherein the video and audio signals representing the at least one participant are further passed through an individual filter before the at least one participant is identified.
- 15 11. The computer program product of Claim 10 wherein the participants are digitally recorded and the video and data signals are video data.
- 20 12. The computer program product of Claim 11 wherein the audio and video data identifying the at least one participant is stored for future use.
- 25 13. The computer program product of Claim 12 wherein the identifying step includes the step of displaying an image as well as name and location of the at least one individual.
- 30 14. The computer program product of Claim 12 wherein the identifying step includes the step of identifying the at least one individual textually.

Docket No. AUS920030335US1

15. An apparatus for automatically identifying participants at a conference who exhibit a particular expression during a speech comprising:

5 means for indicating the particular expression;

means for recording the participants, the recording including both audio and video signals;

10 means for determining, using the recording of the participants in conjunction with an automated facial decoding system, whether at least one participant exhibits the particular expression; and

15 means for identifying the at least one participant who exhibits the particular expression.

16. The apparatus of Claim 15 wherein the video and audio signals representing the at least one participant are  
20 passed through a regional/cultural filter before the at least one participant is identified.

17. The apparatus of Claim 16 wherein the video and audio signals representing the at least one participant are  
25 further passed through an individual filter before the at least one participant is identified.

18. The apparatus of Claim 17 wherein the participants are  
30 digitally recorded and the video and data signals are video data.

Docket No. AUS920030335US1

19. The apparatus of Claim 18 wherein the audio and video data identifying the at least one participant is stored for future use.
- 5 20. The apparatus of Claim 19 wherein the identifying step includes the step of displaying an image as well as name and location of the at least one individual.
- 10 21. The apparatus of Claim 19 wherein the identifying step includes the step of identifying the at least one individual textually.
- 15 22. A system for automatically identifying participants at a conference who exhibit a particular expression during a speech comprising:
- at least one storage system for storing code data; and
- 20 at least one processor for processing the code data to indicate the particular expression, to record the participants, the recording including both audio and video signals, to determine, using the recording of the participants in conjunction with an automated facial decoding system, whether at least one participant
- 25 exhibits the particular expression, and to identify the at least one participant who exhibits the particular expression.
- 30 23. The system of Claim 22 wherein the video and audio signals representing the at least one participant are passed through a regional/cultural filter before the at least one participant is identified.

Docket No. AUS920030335US1

24. The system of Claim 23 wherein the video and audio signals representing the at least one participant are further passed through an individual filter before the at least one participant is identified.
25. The system of Claim 24 wherein the participants are digitally recorded and the video and data signals are video data.
26. The system of Claim 25 wherein the audio and video data identifying the at least one participant is stored for future use.
27. The system of Claim 26 wherein the identifying step includes the step of displaying an image as well as name and location of the at least one individual.
28. The system of Claim 26 wherein the identifying step includes the step of identifying the at least one individual textually.
